

Gunnebo SafeRecycling TCR7

A Profitable, Efficient Frontline Solution
for Fast, Secure Cash Processing

GUNNEBO[®]
For a safer world

Frontline Efficiency and Fast, Secure Cash Processing

Your bank branch is a vibrant and critical part of your business. It works with you to promote your services, attract new customers, strengthen relationships with existing customers, and drive revenue.

Yet for many financial institutions, creating a more modern and efficient branch environment can be daunting. Outdated cash procedures. Costly cash processing. Excess cash inventory. It all adds up to a poor customer experience that leaves revenue on the table and the customer frustrated. They need a simple, comprehensive and integrated solution that speeds cash transaction times, makes accurate deposits and stores cash in real-time, while still engaging customers with a personal touch.

The SafeRecycling TCR7 from Gunnebo meets the demands with a robust set of integrated teller automation capabilities. Adapted to under-counter installation, it provides an ergonomic, frontline cash management solution to drive fast, secure and efficient banknote processing.

Notes are automatically registered, counted, deposited, stored and dispensed at the point of each transaction. Cash limits become more visible. Excess cash inventories are reduced. Tellers can spend more time engaging customers and building stronger relationships, leading to higher referral rates and added cross-selling revenue.

Reliable, High-Performing Technology Drives Value Across the Enterprise

CEO: Shareholder Value & Customer Satisfaction

- Maximize shareholder value
- Build a strong and supportive employee culture
- Deliver best-in-class customer service

CFO: Financial Performance

- Increase revenues and profits
- Reduce labor costs and staff expenditures
- Reduce the amount of cash-on-hand

COO: Operational Efficiencies

- Improve customer service
- Deliver efficient branch operations
- Maximize branch space and increase customer flow

Branch Manager: Branch Efficiency & Teller Productivity

- Drive efficient branch operations
- Increase teller productivity
- Build stronger customer relationships

Teller: Customer Satisfaction & Secure Environment

- Eliminate transaction and balancing errors
- Cross-sell and up-sell more products
- Deliver a superior customer experience

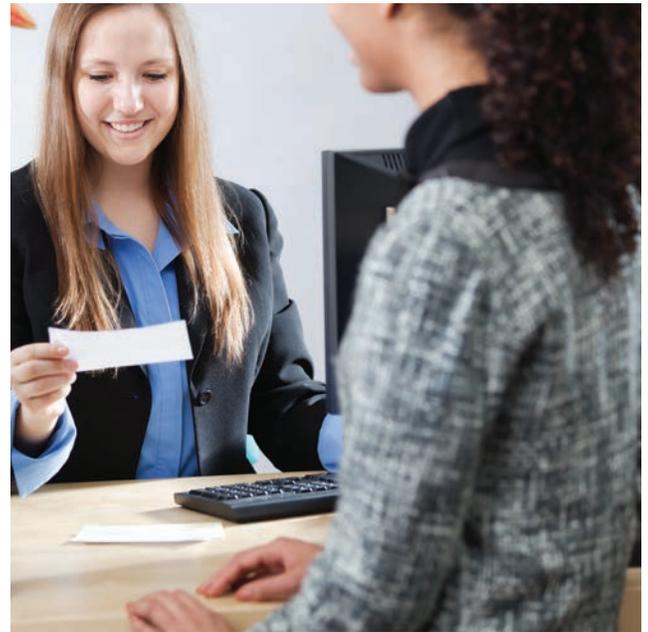

An intelligent, secure cash management solution

The TCR7 is a full-service automated note recycling solution designed to increase security, efficiencies and cost control in your branch operations. Using a cassette-based intelligent system, notes are verified, accepted, instantly counted, and housed in a UL-291 rated safe, ready to be dispensed again.

Once a transaction is started, multiple notes are continuously fed, processed, loaded and stored by denomination in a cassette. No more manual counting, dual controls, cash drawer limits, or trips back and forth to the main vault. For added security, the TCR7 detects and rejects counterfeit notes back to the teller for evaluation.

The intelligent cassette-based technology provides an optional escrow process, speeding up each transaction. The cash is securely stored in multiple cassettes. If the teller needs to reverse a deposit transaction, the exact same notes are dispensed for the customer.

Demand excellence – and get it.

The TCR7 delivers the robust set of capabilities you need to transform your branch into an efficient full-service operation.

Ergonomic design – Easily place bills into an open, shutter-free cash slot. Centralized 5.7” touch screen provides real-time visibility of cash balances and service information for teller efficiency and comfort. The TCR7 can be used by multiple tellers simultaneously.

Continuous feed – Automatically count, validate, sort, dispense and store multiple banknotes for a more efficient, streamlined operation.

Easy maintenance – In the event of an error, touch screen service instructions provide guidance to the point of jams so it can be easily cleared by your staff.

Large capacity – Process up to 3,400 notes per cassette and 2,800 notes in up to 8 split cassettes. The TCR7 stores and recycles cash for up to 17,000 notes into five cassettes.

Maximum security – Store and recycle cash into five secure cassettes and a UL-291 certified safe.

Note recognition technology – Take 10 pictures per second of the front and back of notes and store the notes’ serial numbers for added security.

Self-auditing – Count and audit cash in each cassette by moving fully loaded back cassettes to the two front cassette locations. Fully loaded cassettes eliminate the need to manually count and prepare cash for CIT pickup.

Enhanced integration – Integrate cash recycling into existing teller software applications for transparent use across bank operations. Compatible with popular teller systems and integrations from CFM, Compuflex and Add-On Technologies, among others.

Small footprint – Compact size and flexible design enable the unit to fit in small spaces and a wide variety of teller desk configurations.

BENEFITS

- Increase revenue and cash flow
- Reduce operating and staff costs
- Mitigate risk of theft and robbery
- Accelerate cash transactions at drive-up and over-the-counter
- Reduce cash-handling errors
- Increase real-time visibility of cash-levels across all branches
- Improve customer and teller security
- Deliver a superior customer experience with personalized, quality service
- Boost teller productivity
- Increase cross-sell and up-sell product opportunities
- Cut costs with automated internal auditing
- Save time and reduce costs with optional escrow
- Reduce service calls with high reliability

TECHNICAL DATA

Counting speed	Up to 10 notes/second
Note feeding capacity	Continuous feed of notes with no cash limits
Recycling capacity	Up to 8 denominations
Banknote capacity	5 cassettes with 2,800 notes/ split cassettes and 3,400 notes/full cassettes
Operation	Freestanding
Dimensions	36" high x 21" wide x 40" deep
Weight	1,300 lbs.
Power supply	120V, 60Hz
